

Score for Sustainability

Through the Partnership with Subaru and the Philadelphia Union, Subaru Park Aims to Become a Leader in Environmental Sustainability

Sports stadiums generate massive amounts of waste that go into landfills. However, our partnership aims to turn Subaru Park into the first Zero Landfill stadium in Major League Soccer.

That's right, ZERO.

In an average year, Subaru Park will divert **357,480 pounds** of waste from local landfills.

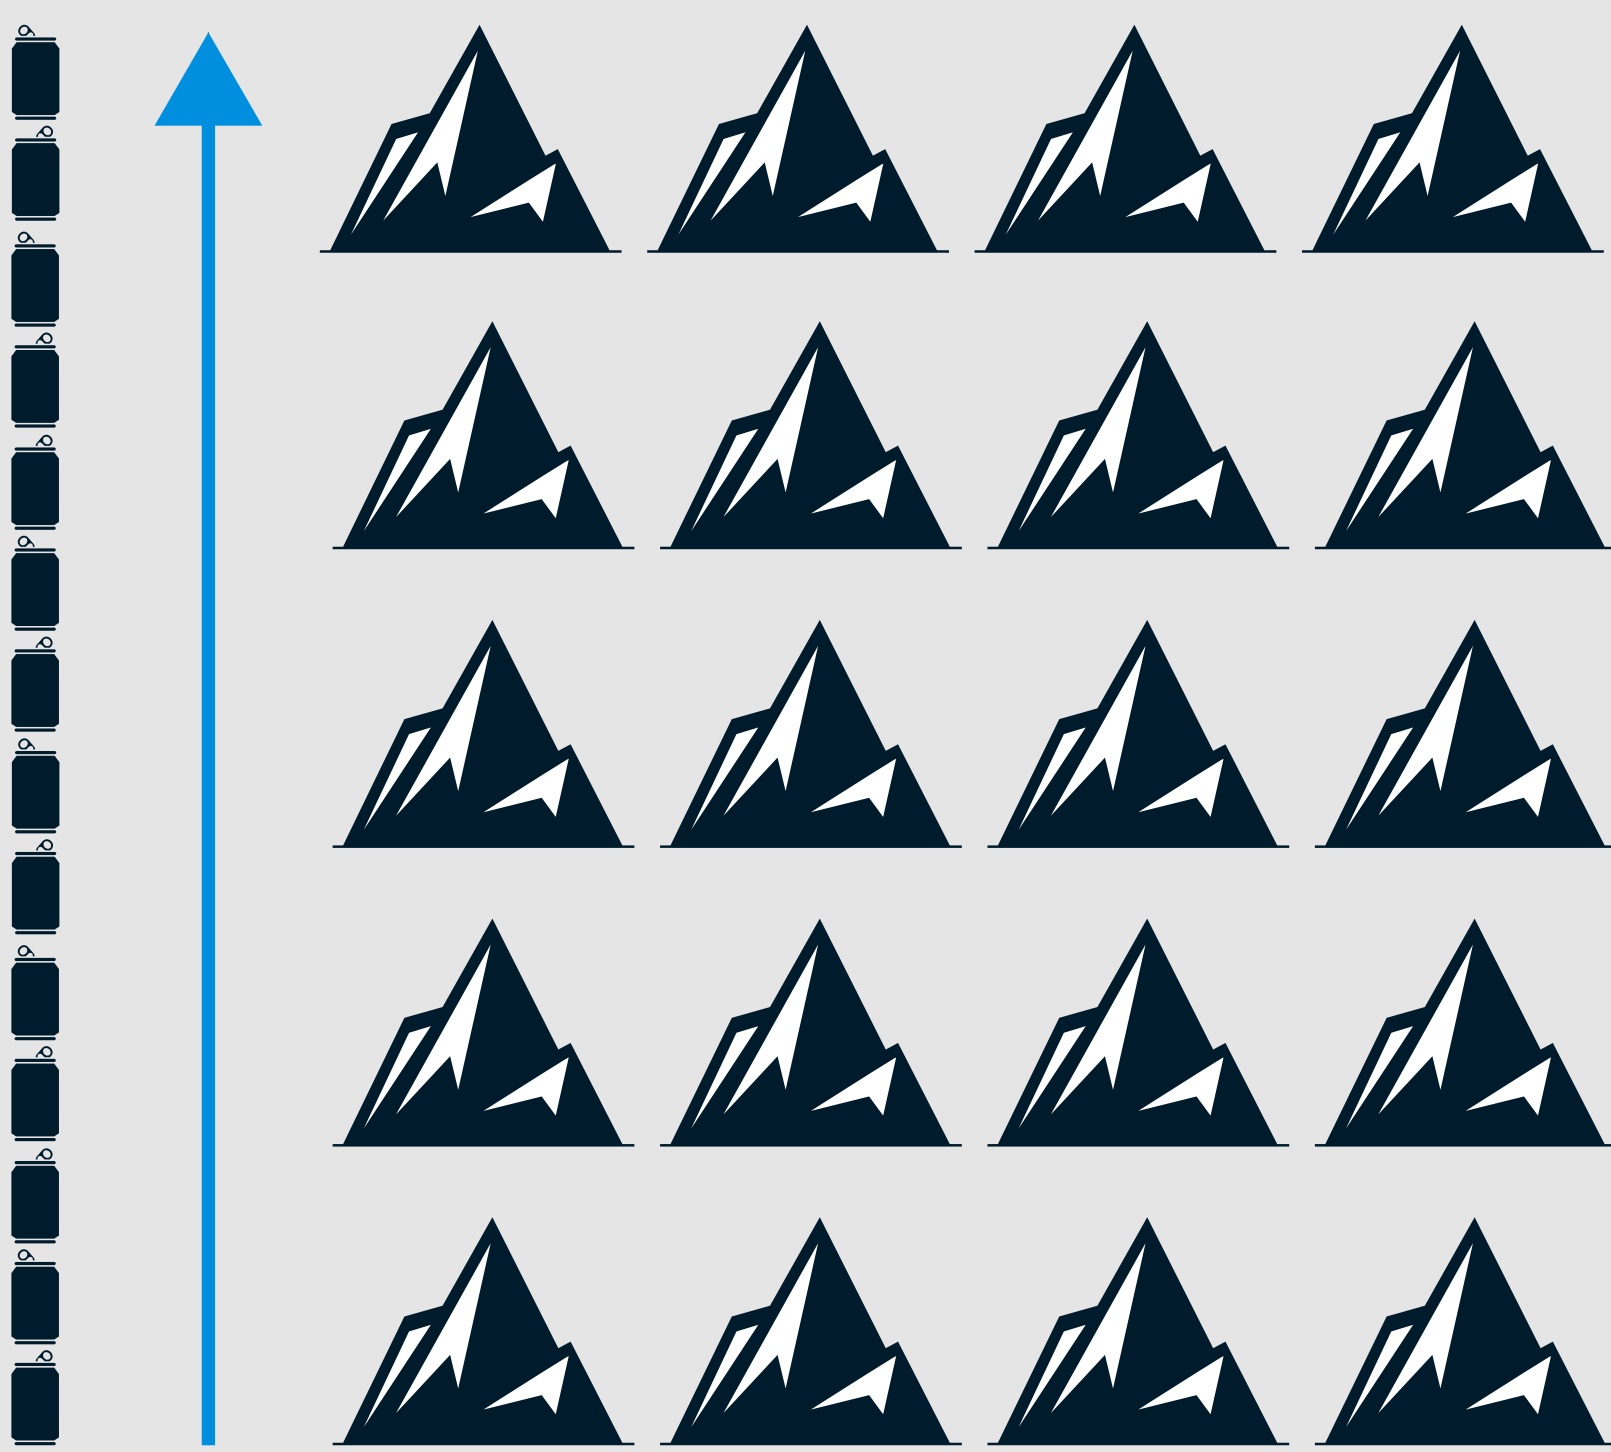

How does our waste diversion measure up?

waste diverted from landfill = the weight of **357k Soccer Balls**

number of stacked aluminum cans = height of **20 Mt. Everests**

We're doing our part to create a model of sustainability for others to follow. Together we can help protect our environment for generations to come.
